GUARDRAILS: SAFETY & STANDARDS

Standards

Established test case & scripting standards ensure consistency, compliance, and high-quality test scripts across teams. They provide clear guidelines for the AI to operate in.

Non-anonymous credentials

Using identifiable credentials guarantees traceability and accountability, reducing risks and enhancing security.

Version control

Version control preserves process, enables auditing, and supports collaborative development, ensuring a reliable and expandable workflow.

FAILURE MODES & MITIGATIONS

Incorrect Output

AI may generate scripts and tests with errors or inaccuracies, leading to operational risks and misinformation.

Human review

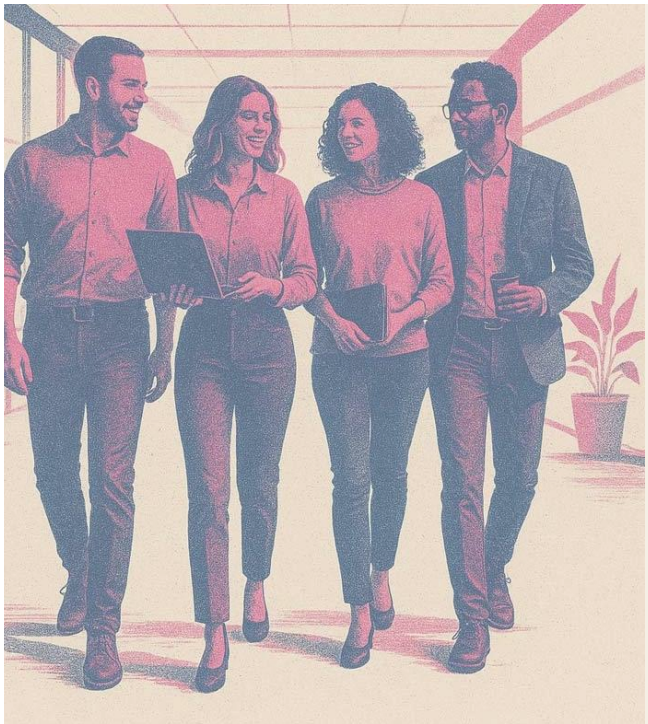
Implement rigorous human review processes to validate and correct AI-generated scripts before deployment.

Lack of Detail

AI may misinterpret context or make invalid assumptions resulting in irrelevant or inappropriate outputs.

Building Context

Continuously building on environmental context gives AI models access to data that improves understanding and relevance.



FUTURE STATE

Vision – Transition from local to global

- Reduce Dependencies
- Smarter Reasoning Where it Matters
- Easier Adoption & Usability
- Enterprise Ready
