Your AI-QA Action Plan

❓ 45–60 min

Q&A

THE LANDSCAPE

The QA World Has Changed

68%

of organizations are actively using or have a Gen AI roadmap for QE

Source: World Quality Report 2024

72%

report faster automation processes after Gen AI integration

Source: World Quality Report 2024

80%

of organizations using AI in testing improved defect detection

Source: Capgemini Survey

50%

reduction in test case creation time — e.g. Capital One with AI

Source: ISG / Capgemini, 2024

Fear It

- ✗ AI will replace QA roles
- ✗ Skills become obsolete
- ✗ Reactive, defensive posture
- ✗ Organizations leave you behind

Lead It

- ✓ AI amplifies QA expertise
- ✓ Skills become more valuable
- ✓ Proactive, strategic posture
- ✓ You become indispensable

AI TOOLKIT

The AI Tools You Need to Know

Each brings unique strengths — savvy QA teams leverage all three

Claude

by Anthropic

- Long-form reasoning
- Test plan drafting
- Nuanced analysis
- Document generation

Best for: Complex test strategies & documentation

ChatGPT

by OpenAI

- Conversational iteration
- Code generation
- Multi-turn refinement
- Wide plugin ecosystem

Best for: Iterative test case creation & scripting

Copilot

by Microsoft

- IDE integration
- Inline code suggestions
- M365 ecosystem
- Real-time assistance

Best for: In-context automation & script writing

ECOSYSTEM

AI + Atlassian: A Powerful Partnership

Requirements & User Stories

Input: Confluence pages, Jira epics, design docs

Test Plans & Test Cases

Output: Jira test tickets, Xray/Zephyr integration

AI Engine

Bug Reports & Defects

Output: Jira issues with full context & steps

Confluence Docs & Reports

Output: Auto-updated pages, test metrics, dashboards

GETTING CONNECTED

4 Ways to Connect AI to Your Atlassian Stack

Copy & Paste

Zero setup

Copy requirements from Confluence or Jira, paste into any AI chat, copy the output back. Works today with any AI tool.

Claude.ai · ChatGPT · Copilot

Atlassian Intelligence

Requires AI license tier

Atlassian's native AI built directly into Jira and Confluence. Summarizes issues, drafts content, and suggests test cases without leaving the tool.

Jira · Confluence · Rovo

Browser Companion

Browser extension

AI works alongside your open Jira and Confluence tabs. Read a story, get test cases generated in a side panel — no copy-paste required.

Claude in Chrome · Copilot in Edge

API / MCP

Developer setup required

Connect Atlassian REST API + AI API directly, or use Model Context Protocol so Claude can read and write Jira/Confluence in a single conversation.

Atlassian REST API · Anthropic API · MCP

← LESS SETUP MORE POWER →

PART 1

From Requirements to Test Plans — Automatically

Stop spending hours writing what AI can draft in seconds

TEST PLANS

3 Steps from Requirements to Test Plan

📥 Feed In Requirements

Point AI at your Confluence page, Jira epic, or paste requirements directly. Include acceptance criteria, user personas, and design specs for richer output.

🧠 AI Analyzes & Drafts

The AI identifies testable scenarios, infers edge cases, maps risk areas, and structures a comprehensive plan following your team's format.

✅ Review, Refine & Publish

You review the draft, adjust priorities, add domain knowledge, and push the plan directly into Jira/Xray with one click.

WORKED EXAMPLE • Gherkin Test Cases from User Story • Ready for Xray Import

PROMPT

"You are a senior QA engineer. Review this user story and acceptance criteria. Generate test cases in Gherkin format (Feature, Scenario, Given/When/Then). Include happy path, negative tests, and edge cases. One scenario per test case."

AI OUTPUT

```
Feature: User Login

  Scenario: Successful login
    Given I am on the login page
    When I enter valid credentials
    Then I should see the dashboard

  Scenario: Login with wrong password
    Given I am on the login page
    When I enter an incorrect password
    Then I see an error message
    And the attempt is logged

  Scenario: Account lockout
    Given I have failed login 5 times
      When I attempt to log in again
    Then my account is locked
    And I receive a lockout email

  Scenario: Empty form submission
    Given I am on the login page
      When I click submit with no input
    Then I see inline validation errors
    And the form is not submitted
```

TEST CASES & BUGS

Beyond Test Plans: Cases & Bug Reports

AI Test Case Generation

- Generates test cases directly from AC
- Includes happy path + negative paths
- Automatically assigns priority levels
- Maps to requirements for traceability
- Exports directly to Xray or Zephyr

TRY THIS PROMPT

"Generate test cases for [user story] in Gherkin format (Scenario, Given/When/Then). Include happy path, negative scenarios, and boundary conditions. One scenario per test case."

AI Bug Report Builder

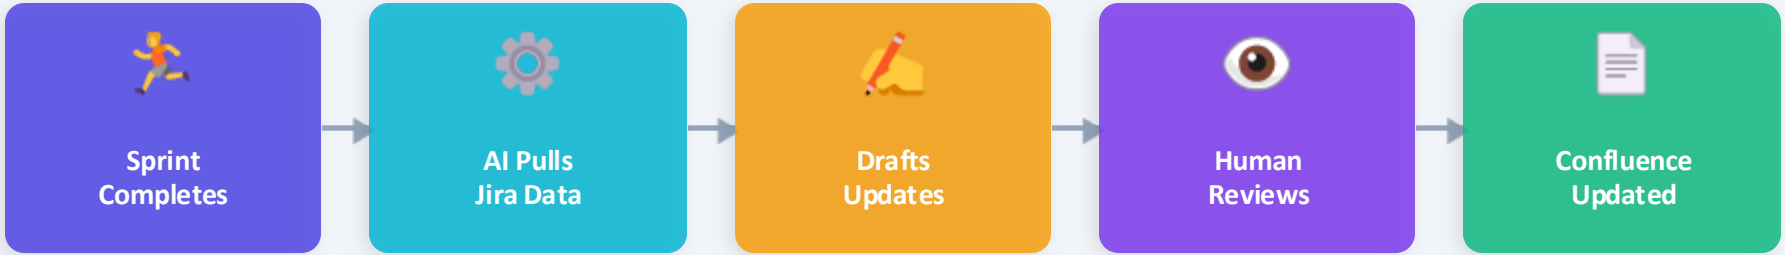
- Describe bug in plain language
- AI structures into Jira-ready format
- Auto-fills: steps, severity, component
- Suggests labels & fix version
- Links to related failing test cases

TRY THIS PROMPT

"Bug found: [plain description & evidence]. Write a Jira-ready report: summary, steps to reproduce, expected vs actual, severity, environment, and suggested labels."

DOCUMENTATION

Confluence That Keeps Itself Fresh



What Gets Auto-Updated in Confluence:

- 📊 Test coverage metrics & pass/fail rates
- ⚠️ Open defect summaries by component
- 📋 Sprint test summary reports
- 📈 Trend charts for quality metrics over time
- 🔗 Traceability matrices (requirements ↔ tests)
- 🎯 Release readiness scorecards

TRY THIS PROMPT

"Summarize this sprint's test results for Confluence: total tests run, pass/fail rate, top defects by severity, coverage gaps identified, and a release readiness recommendation. This document's intended audience is for Product and QA Leadership."

PART 2

Flipping Quality Metrics on Their Head

From lagging indicators to real-time quality intelligence

COVERAGE

Auto-Spotting Coverage Gaps

BEFORE AI

- ✗ Manual gap analysis takes days
- ✗ Relies on individual team member knowledge
- ✗ Coverage blind spots persist undetected
- ✗ Requirements change → tests don't update
- ✗ Hard to quantify what's actually untested

VS

AFTER AI

- ✓ Real-time gap analysis across all stories
- ✓ AI cross-references every requirement
- ✓ Flags untested code paths immediately
- ✓ Auto-proposes new tests when ACs change
- ✓ Coverage heatmaps by feature & risk

TRY THIS PROMPT

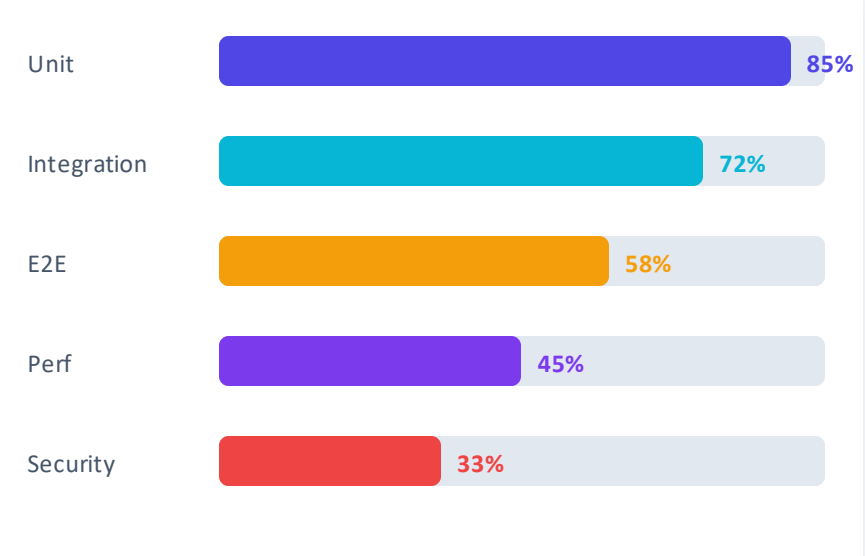
"I'm testing the following stories: [User story IDs]. Here is my test suite: [import or paste]. Identify any requirements not covered by an existing test and suggest new test cases to close the gaps."

REPORTING

Reports That Make Stakeholders Take Notice

Test Coverage by Layer

EXAMPLE



TRY THIS PROMPT

"Generate a sprint quality report for Confluence: total tests run, pass/fail rate by layer, top 3 defects by severity, and a release readiness recommendation."

Auto-Generated Sprint Reports

AI summarizes test results, defect trends, and risk areas after every sprint — no manual writing.

Executive Quality Dashboards

Stakeholder-friendly views: release readiness score, defect escape rate, coverage trends.

Predictive Quality Scores

AI rates release risk based on test results, open bugs, and historical patterns.

PART 3

Beyond Traditional Manual Testing

AI catches what human eyes miss — and predicts what hasn't happened yet

EDGE CASES

Catching What Traditional Testing Misses

Boundary Conditions

- Min/max field values at exact limits
- Zero and negative input handling
- String length edge cases
- Date/time boundary rollovers

Concurrency Scenarios

- Race conditions in async processes
- Simultaneous multi-user edits
- Session conflict handling
- Database lock scenarios

Environmental Variance

- Low bandwidth / network latency
- Memory pressure scenarios
- Different locale & timezone combos
- Legacy browser/OS combinations

Data Combinations

- Special characters in all inputs
- Unicode & right-to-left text
- Extremely long data strings
- Empty vs. null vs. whitespace

TRY THIS PROMPT

"What edge cases might a QA engineer miss when testing [epic/feature ID]? Think: boundary values, concurrency, data integrity, failure/recovery, security risks, locale, and adversarial inputs."

PREDICTION

Predict Quality Issues Before They Surface

FROM REACTIVE → TO PREDICTIVE → TO PREVENTIVE

Then

Reactive

Find bugs after users report them in production

→

Traditional QA

Proactive

Find bugs before release through thorough testing

→

AI-Enhanced QA

Predictive

AI flags risky code areas before testing even begins

→

Future State

Preventive

AI suggests design changes to eliminate bug classes

TRY THIS PROMPT

"Here are our open defects and coverage data: [bug IDs and other links]. Rate this release 1–5 for readiness. List the top 3 risk areas and note which should block release vs. be accepted as known issues."

PART 4

What the Research Actually Shows

The honest picture — promise, progress, and the gap still to close

THE RESEARCH

What the Research Actually Shows

Testing ranked #1 for AI value

60% of DevOps practitioners say testing is the most valuable area for AI investment — above coding, deployment, and planning.

Tricentis / Techstrong Research, 500+ DevOps practitioners, 2024

AI boosts individuals, not yet systems

75% of developers report personal productivity gains from AI. Yet at the system level, AI adoption correlated with a 1.5% drop in throughput and 7.2% reduction in delivery stability.

DORA Accelerate State of DevOps Report, 39,000+ professionals, 2024

Human oversight remains essential

71% of practitioners check AI outputs at least half the time. Nearly 1 in 5 review every single AI output before trusting it.

Tricentis / Techstrong Research, 500+ DevOps practitioners, 2024

💡 What this means for QA teams

The gap between individual gains and system-level results is exactly where QA professionals add irreplaceable value.

AI is a tool. You're the strategy.

PART 5

Your AI-Enhanced QA Action Plan

Walk out of this room with a clear path forward

ACTION PLAN

Three Phases to AI-Enhanced QA

Foundation (Weeks 1–4)

Start small. Prove the value.

- Pick ONE workflow: test plan generation from requirements
- Run AI + human side-by-side for 2 sprints and compare quality
- Measure time saved and coverage improvement

Integration (Months 2–3)

Connect the tools. Expand the team.

- Connect AI to Jira and Confluence workflows
- Expand to 2–3 more workflows based on Phase 1 learnings
- Train the full team on effective AI prompting

Leadership (Months 4–6)

Build influence. Secure your position.

- Build AI-powered quality dashboards for leadership
- Present ROI and secure ongoing buy-in
- Become the internal AI-QA champion for your org

TAKEAWAYS

What to Remember

01 AI doesn't replace QA expertise — it amplifies it. Your domain knowledge makes AI outputs valuable.

02 Start with test plan generation. It's the highest-ROI, lowest-risk entry point for AI in QA.

03 The Atlassian ecosystem is your force multiplier. Jira + Confluence + AI = end-to-end quality workflow.

04 Metrics matter. Track time saved, coverage gained, and defect reduction to build internal support.

05 Lead from the front. QA professionals who master AI today will define quality standards for the next decade.

YOUR AI-QA PROMPT LIBRARY • Take-Home Reference

KEY: MANUAL ONLY = works via copy-paste, no setup + INTEGRATION = significantly better with a connected tool

TEST PLAN

+ INTEGRATION

"Review this [user story + ACs]. Generate a test plan: happy path, negative tests, edge cases, performance, and accessibility. Format for Jira/Xray."

TEST CASES

+ INTEGRATION

"Generate test cases for [feature] in Gherkin format (Scenario, Given/When/Then). Include happy path, 3+ negative scenarios, and 2 boundary conditions."

BUG REPORT

+ INTEGRATION

"Bug found: [plain description]. Write a Jira-ready report: summary, steps to reproduce, expected vs actual, severity, environment, and suggested labels."

CONFLUENCE

+ INTEGRATION

"Summarize this sprint's test results for Confluence: total tests run, pass/fail rate, top defects by severity, and a release readiness recommendation."

COVERAGE GAPS

MANUAL ONLY

"Here are my ACs: [paste]. Here is my test suite: [paste]. Identify uncovered requirements and suggest 3 new test cases to close the gaps."

EDGE CASES

MANUAL ONLY

"What edge cases might a QA engineer miss testing [feature]? Focus on: boundary values, concurrency, data integrity, failure recovery, and adversarial inputs."

RELEASE RISK

+ INTEGRATION

"Given these open defects and coverage data: [paste]. Rate this release 1–5 for readiness. List the top 3 risks and note which should block release vs. be accepted."

Questions?

15 minutes for Q&A

Don't have a question? Try this prompt when you get back to your desk:

"Write test cases for [your next user story] in Gherkin format. Include happy path, negative tests, and edge cases — ready for Xray import."
