Industry Talk:
Testing with AI & Testing AI

inflectra®

Who Is Inflectra?

inflectra®

When Failure Isn't An Option. We Help You Deliver. And Prove It.

Inflectra unifies software delivery, quality, compliance, and traceability so you can ship at AI speed, reduce risk, and prove every release is ready.

inflectra®

Inflectra: Delivering Mission-Critical Software Without Sacrificing Agility or Compliance

FOR REGULATED PROCESSES

- End-to-end lifecycle traceability
- Security & data privacy (cloud & on-premise)
- Baselining, audit trails & customizable reporting
- Fully integrated risk management
- E-signatures, timesheets, customizable templates, workflows and reports

INFLECTRA'S CORE PRODUCT SUITE

SpiraPlan®

SpiraTeam®

SpiraTest®

SpiraApps

DataSync ™

SpiraCapture ™

Rapise®

Inflectra.ai ™

FOR AGILE PROCESSES

- AI-powered & Agile functionality
- Scaled and enterprise agile support
- Framework-agnostic for DevOps
- CI/CD
- Full functionality for distributed and remote-working teams

98% customer satisfaction rating

inflectra

AI in the Software Lifecycle

How AI is Transforming the Software Development Lifecycle

inflectra®

Agentic AI: Adoption in the Enterprise

Phase 1: Digital Intern	Phase 2: Digital Employee	Phase 3: Digital Team
Coding Assistants, Digital Marketing, Internal / External Chat-bots. Era of #GenerativeAI	Workflow automation, autonomous agents, vibe coding, IT modernization, synthetic data generation	AI agents working together, AI "middleware", A2A, MCP & ACP protocols. Era of true #AgenticAI

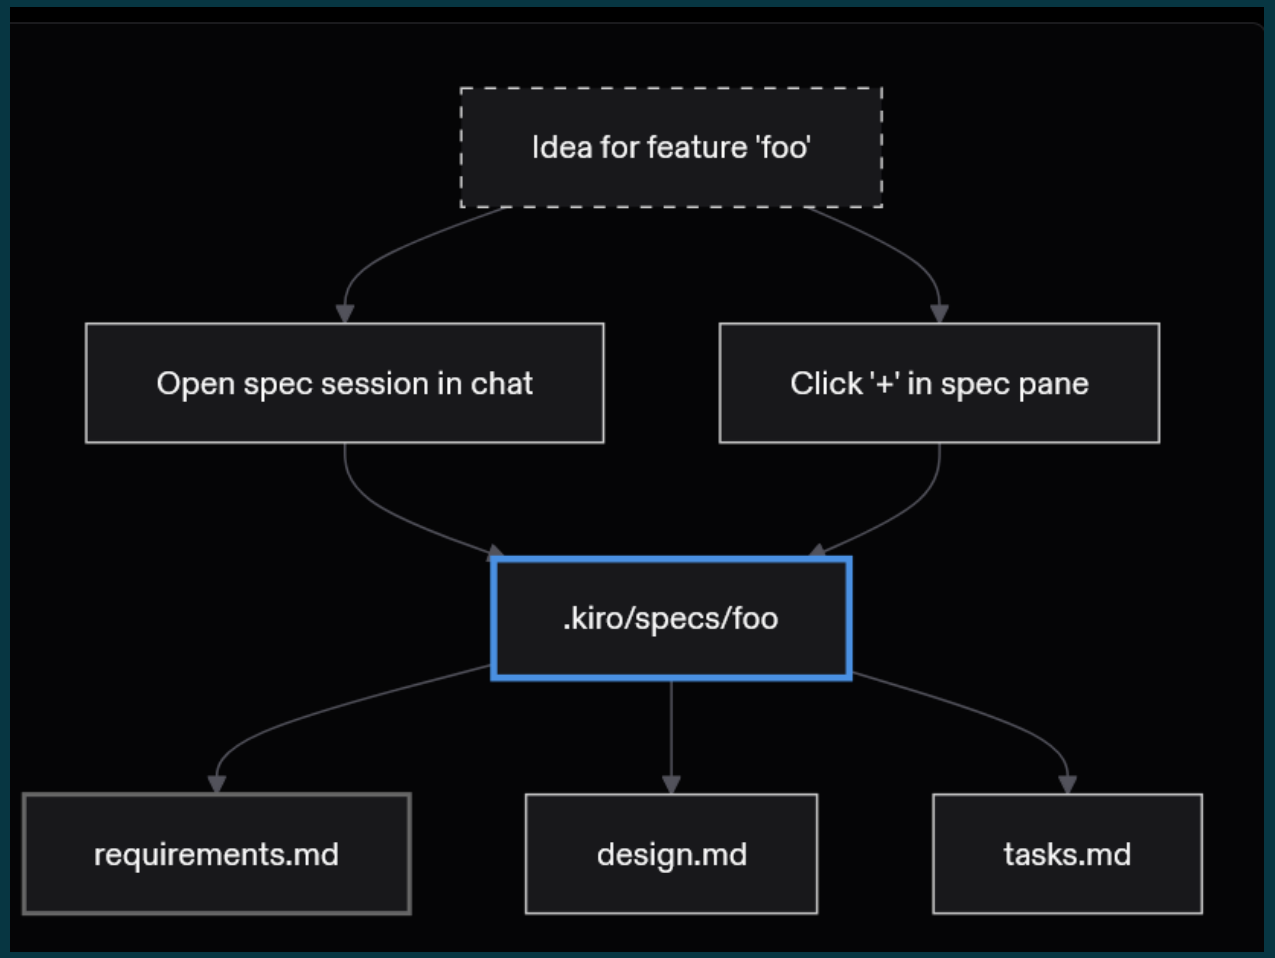
inflectra®

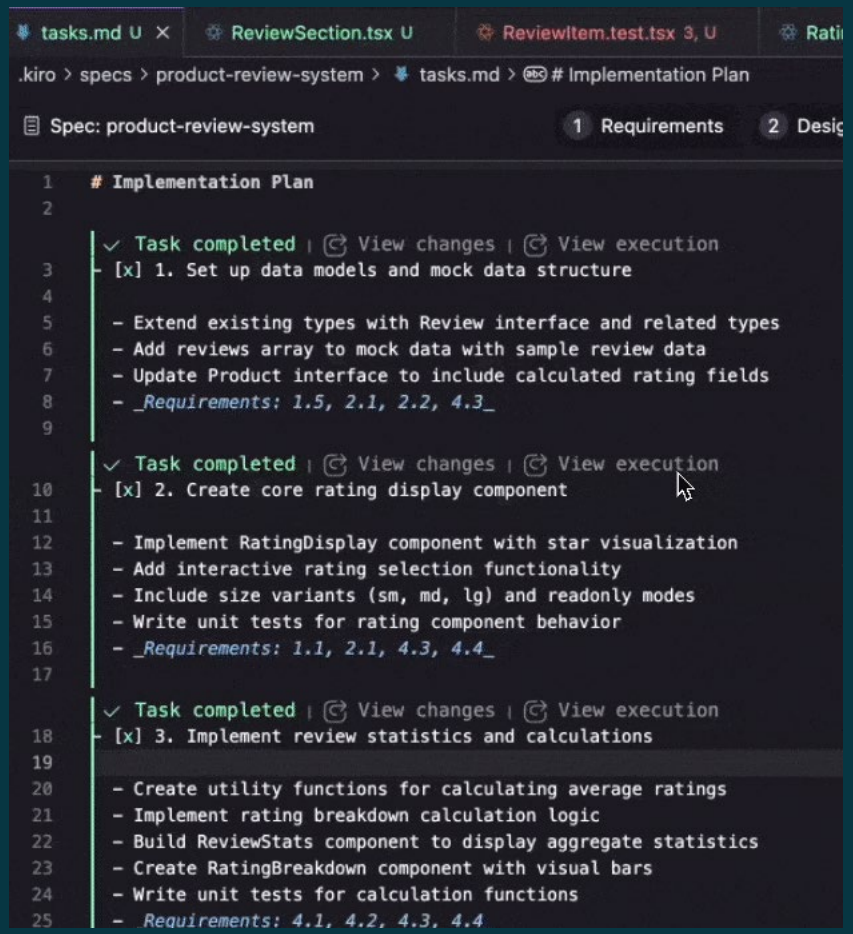
What's Changed With AI?

- Product owners will create/direct software development with digital teams creating the actual products, similar to how CAD changed physical manufacturing.
- Insights can now be extracted from unstructured data without massive data warehouses and brittle structured databases
- All applications will now become effectively 'black box' packaged apps, created and tested by mostly digital teams, directed by human product owners.
- The user interface will change from GUI to conversational chat, with answers and insights replacing dashboards

inflectra

Spec-Driven Development with Agentic AI





inflectra®

AI Has Created New Bottlenecks

- AI is turbocharging developer productivity for coding but creating new bottlenecks in other phases like testing, validation, documentation.
- AI making testing more important than ever. And the volume of needed testing is growing rapidly.
  (if you don't believe me, listen to the CEO of Cursor)
- GenerativeAI-based systems are harder to test as they are non-deterministic, now they have agentic capabilities!
- How do we supercharge the rest of the SDLC to keep up?

inflectra

Using AI To Accelerate Testing

inflectra®

Agentic AI: Adoption in the Enterprise

Phase 1: Digital Intern	Phase 2: Digital Employee	Phase 3: Digital Team
Coding Assistants, Digital Marketing, Internal / External Chat-bots. Era of #GenerativeAI	Workflow automation, autonomous agents, vibe coding, IT modernization, synthetic data generation	AI agents working together, AI "middleware", A2A, MCP & ACP protocols. Era of true #AgenticAI

inflectra®

Inflectra AI Capabilities

Provides central AI layer for Spira and Rapise that enables a set of defined use cases that streamline the software development and testing lifecycles, as well as providing insights and analysis:

inflectra.ai

SPIRA PLATFORM

AI Overview: Generates artifacts, create backlogs, analyze requirements for quality, release progress

Use Cases: Requirements, test cases, test steps, tasks, BDD scenarios, and risks. Release insights & risks

Business Model: Flat unlimited subscription at $2/user/month linked to your Spira subscription

RAPISE PLATFORM

AI Overview: Creates automated test scripts from manual tests, perform autonomous testing

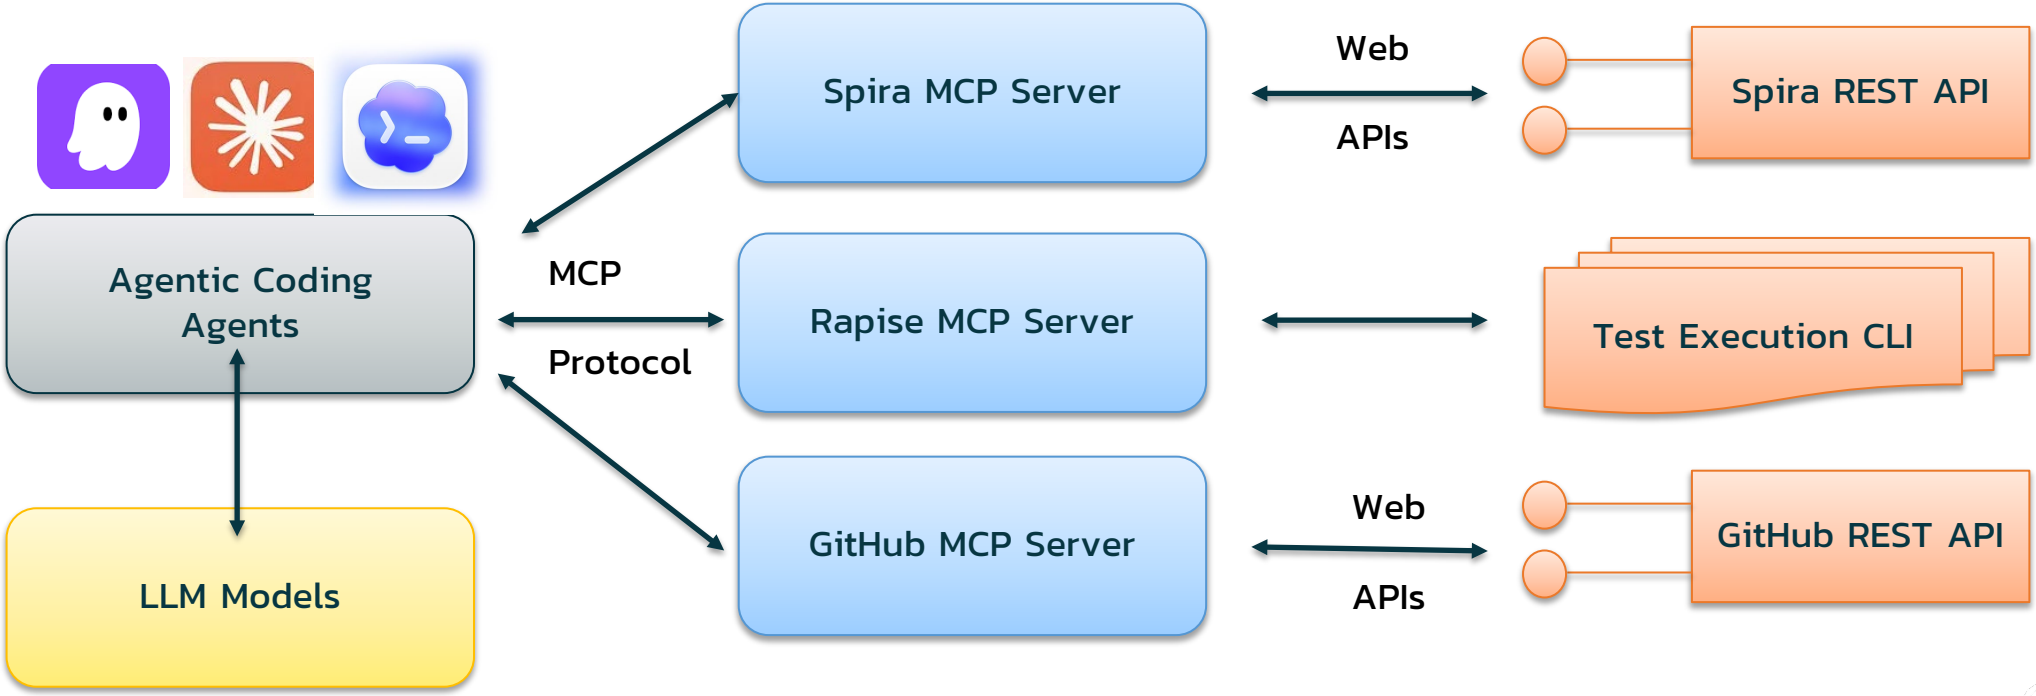
Use Cases: Generate test data, run manual tests as automated, self-healing of tests, execution analysis.

Business Model: GenAI capabilities included with core Inflectra.ai subscription, leads to Rapise PLG motion

inflectra

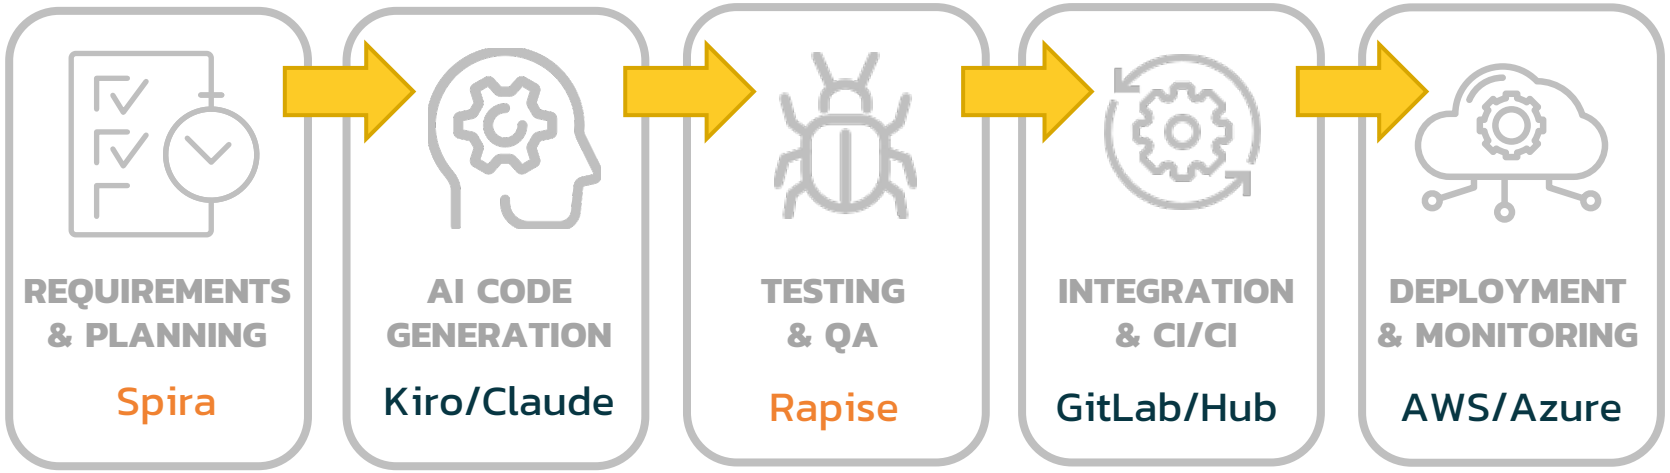
Integrating Inflectra.ai with MCP

Our products have MCP Servers and integrate with agentic coding agents like Claude, Kiro, Anti Gravity, Codex for spec-based development:



From System of Record to Action

- Understanding what matters, what changed, and what's at risk in real time as software is built faster with AI.
- Together, Spira and Rapise form a closed-loop system that delivers traceability from intent to execution to evidence automatically, continuously, and at scale.



Inflectra Differentiators in the Age of AI

- Integrated vertical and horizontal traceability
- Strong support for auditability and compliance
- Existing AI platform that lets us add use cases easily, and pull large amounts of existing data that we have inside our platform from our existing integrations
- Experience with large-scale, complex applications, understanding scaling AI-SDLC beyond simple demo apps
- Ability to be deployed in public, private clouds, on-prem unlike Atlassian and other vendors going 100% SaaS

SO HOW
DO WE
TEST
AI?

Introducing: SureWire.ai

Testing AI Systems and AI Agents

© Copyright 2006-2026 Inflectra Corporation

Testing AI Agents Using: SUREWIRE™

The first QA platform built specifically for AI agents—testing for safety, consistency, and compliance before your agents meet the real world:

Adversarial Risk

Bad actors probe for prompt injection, goal hijacking, and boundary violations. Are you testing for that before they do?

Auditability

Regulated industries need documented proof of what was tested, when, and what the agent did; not just a green checkmark.

Behavioral Drift

Every model update or prompt change can shift how your agent behaves. You need repeatable metrics to catch that before your users do.

Non-Determinism

Your agents reason probabilistically. Pass/fail test scripts can't evaluate that.

inflectra®

Solution: Using Agents to Test Agents

To reliably test AI agents you need AI agents

This approach is for GenAI and Agentic workflows what traditional automated tests are for deterministic code:

- Auto generate representative testing material
- Orchestrate tests against real AI endpoints
- Judge outputs (minimum standards, accuracy quantification)
- Improve accuracy and reliability

Gartner: GenAI spending in 2026 will reach $644bn
