GAIN YOUR DEVOPS EDGE

Perforce Suite of Products Today

POWERING ENTERPRISE DEVOPS – FROM CODE TO BUSINESS READY

Digital Creation

Unified Code and Design Suite

P4 CORE (Version Control at Scale)

P4 DAM (Digital Asset Management)

P4 PLAN (Agile Project Management)

ALM (Application Lifecycle Management)

IPLM (IP / Hardware / ML Lifecycle)

P4 ONE (Local Versioning for Creatives)

Developer Tools

Develop with Integrity and Clarity

AKANA (API Management)

OPENLOGIC (Open Source Management)

ZEND (Enterprise PHP Server)

JREBEL (Accelerate Java Development)

GLIFFY (Visual Diagramming with AI)

COMPONENTS (C/C++ and Analysis)

Testing Automation

Experience Testing and Monitoring

PERFECTO (AI-based Experience Testing)

BLAZEMETER (Load Testing and Monitor)

KLOCWORK (Code Quality Analysis)

QAC (Static Analysis for C/C++)

Platform Automation

Compliant Data and Infrastructure

PUPPET (Infrastructure Compliance)

DELPHIX (Test Data Management)

Security Compliance

Build more robust, secure, and compliant software while streamlining the development process and reducing overall risk

CODE COMPLIANCE | DATA COMPLIANCE & MASKING | POLICY ENFORCEMENT | SECURE API MANAGEMENT | OPEN-SOURCE SUPPORT

PLAN → CODE → TEST → RELEASE → DEPLOY → OPERATE → MONITOR

Empower your Teams across the DevOps Lifecycle

perforce **Gliffy**

Natural Language to Diagram at unimaginable speed

perforce **P4 Platform**

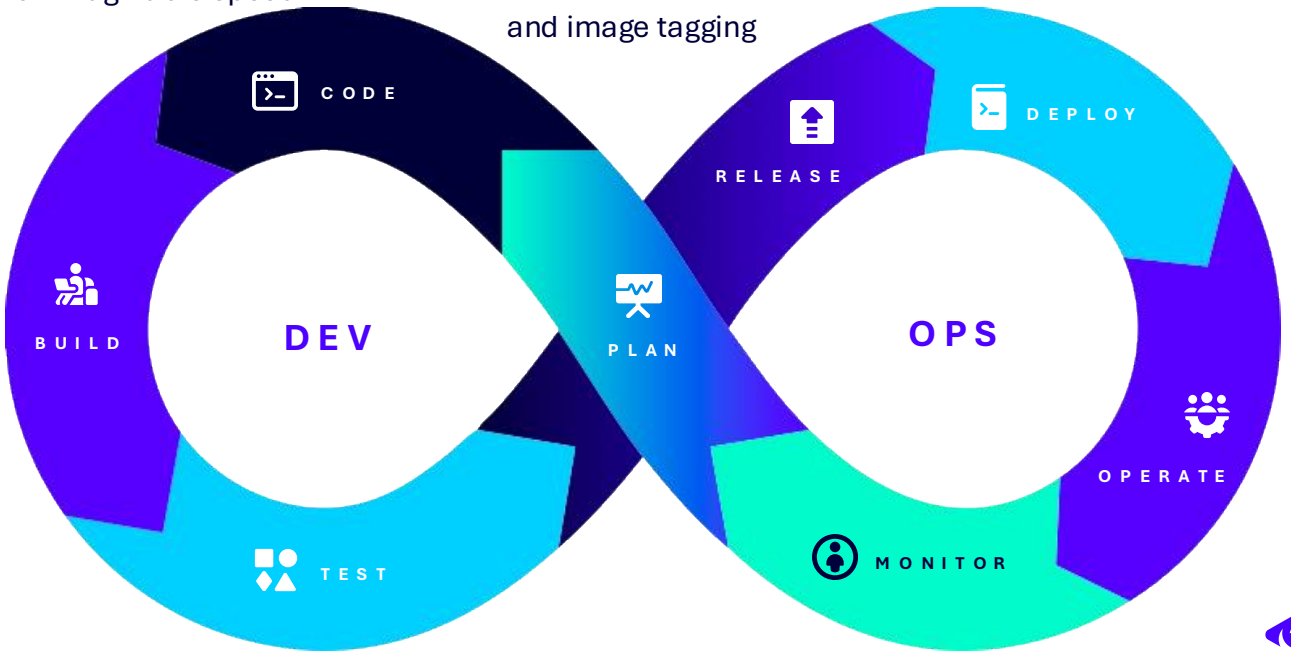
Accelerated Code review and image tagging

perforce **Puppet**

Infra Assistant using natural language to unlock access to infra data

perforce **Klocwork** perforce **QAC**

Static Code Analysis Rule generation for efficiency



perforce **Delphix**

Compliant data to fuel your AI Agent and ML projects

perforce **Perfecto** perforce **BlazeMeter**

One input. Any test. Web, mobile, and beyond

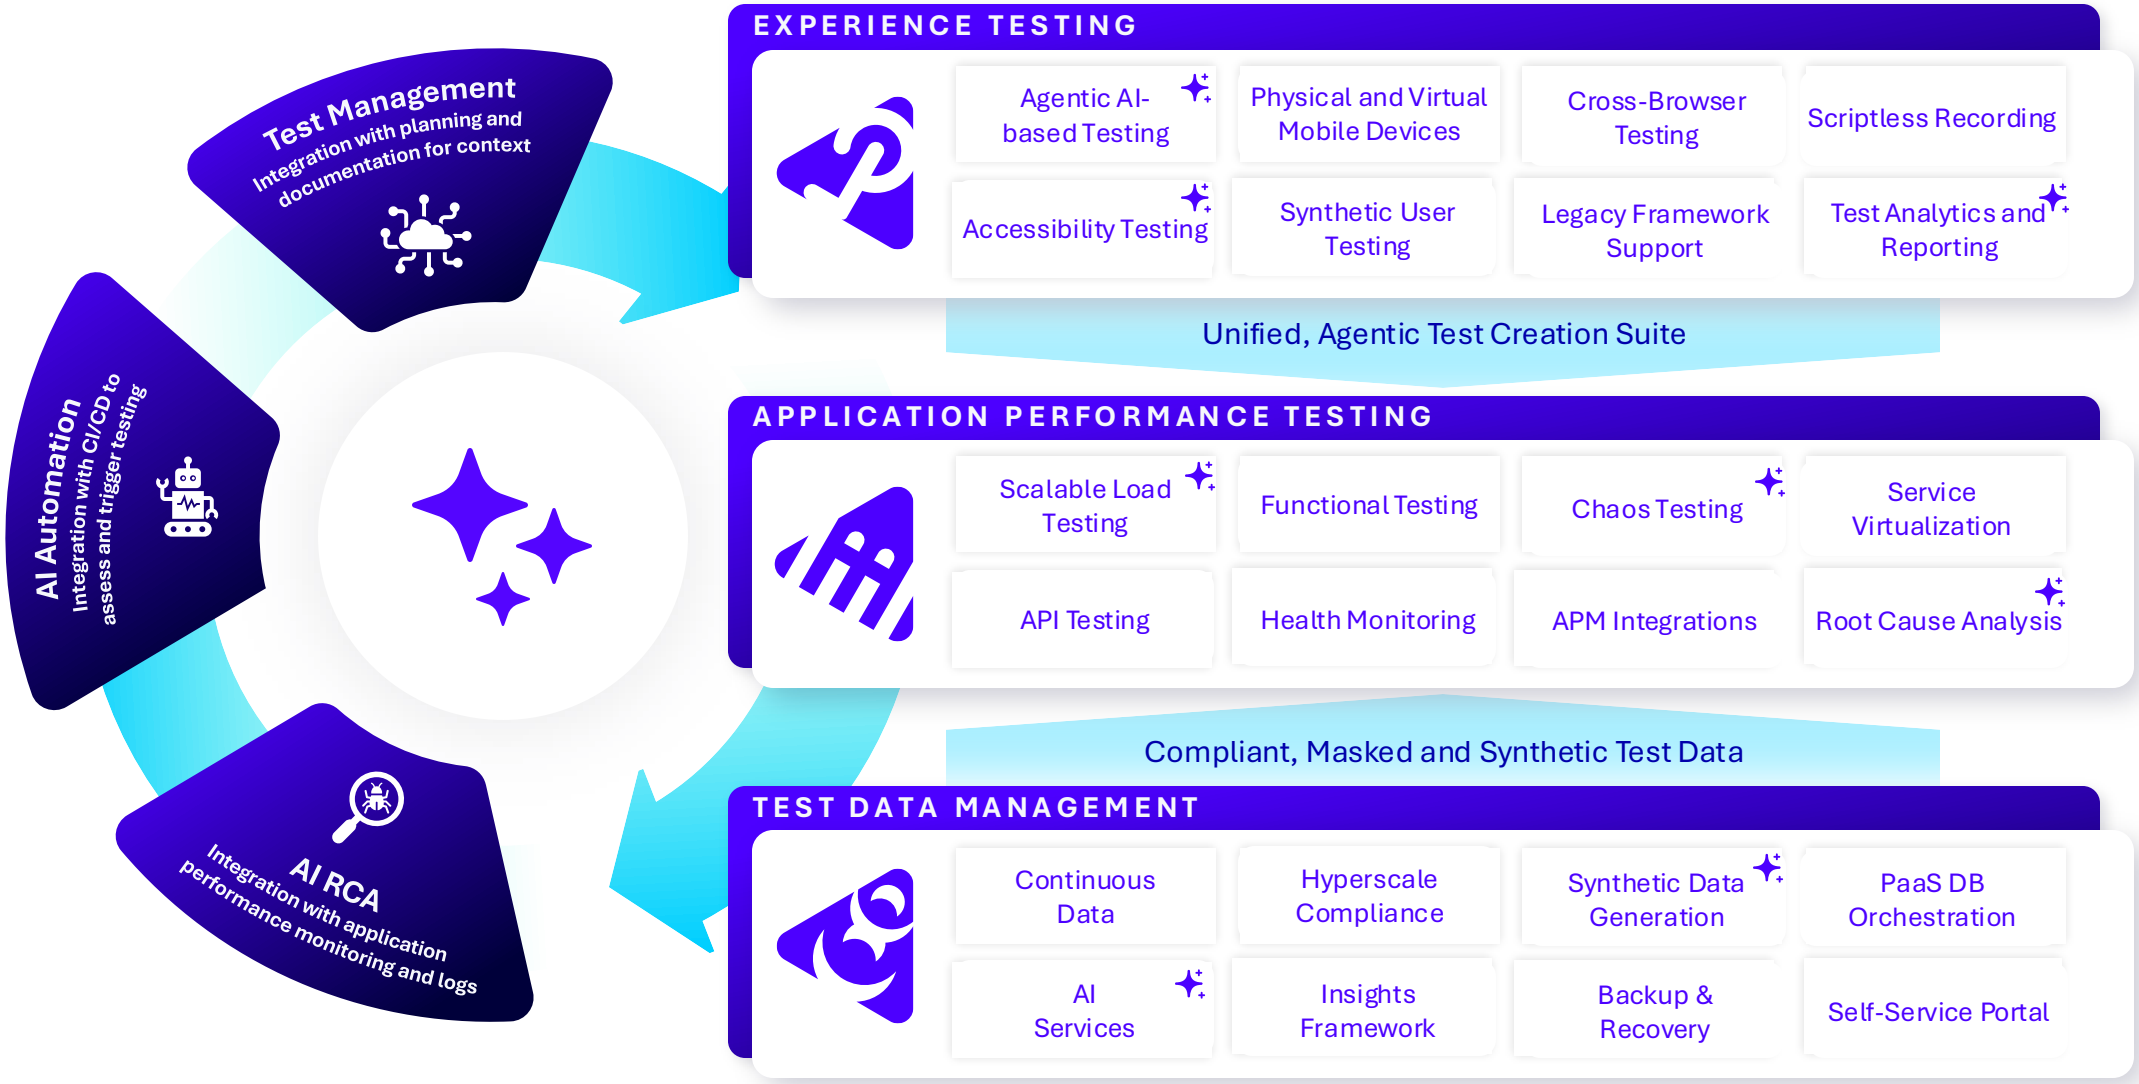
Perforce CXT Continuous Experience Testing



How is DevOps Evolving?

© Perforce Software, Inc. All rights reserved.

perforce

Many Roles in DevOps will **Shift Up**

Teams will focus on operating AI Agent use of existing tools as integrated services

Teams | AI Agents

Plan → Code → Build → Test → Release → Deploy → Operate → Monitor

Creation

- **Landscape**
  Teams will continue to require tools to manage requirements and communicate plans for digital delivery.
- **Trend**
  AI code-assist will continue to improve, inclusive of implementing complete applications and major changes in existing systems.
- **Impact**
  Planning tools will orient to improved prompt engineering to drive AI creation, while the quality of the AI will be dictated by integrated access to existing code, assets, IP and data.

Validation

- **Landscape**
  Application composition has become increasingly complex across a multitude of PaaS and SaaS services combined with ever larger sets of data and scenarios to manage.
- **Trend**
  Advances in semantically aware AI can be used to navigate and validate end-to-end application composition, increasing validation coverage and speed.
- **Impact**
  Testing tools will become increasingly automated with AI, requiring efficient and secure access to data and business context to drive qualitative validation from development to production.

Operation

- **Landscape**
  Businesses are navigating a multitude of infrastructure topologies, both private and public, required to power key, operational systems.
- **Trend**
  The need to reduce complexity in prioritizing and automating feedback from security, financial, and application systems in order to maintain consistent, trusted operations.
- **Impact**
  In order to scale operational efficiencies, tools will re-orient from task-based management to policy-based to drive consistent operation of business-critical systems and compliance.

DevOps Will Be Driven by Enabling AI at Scale

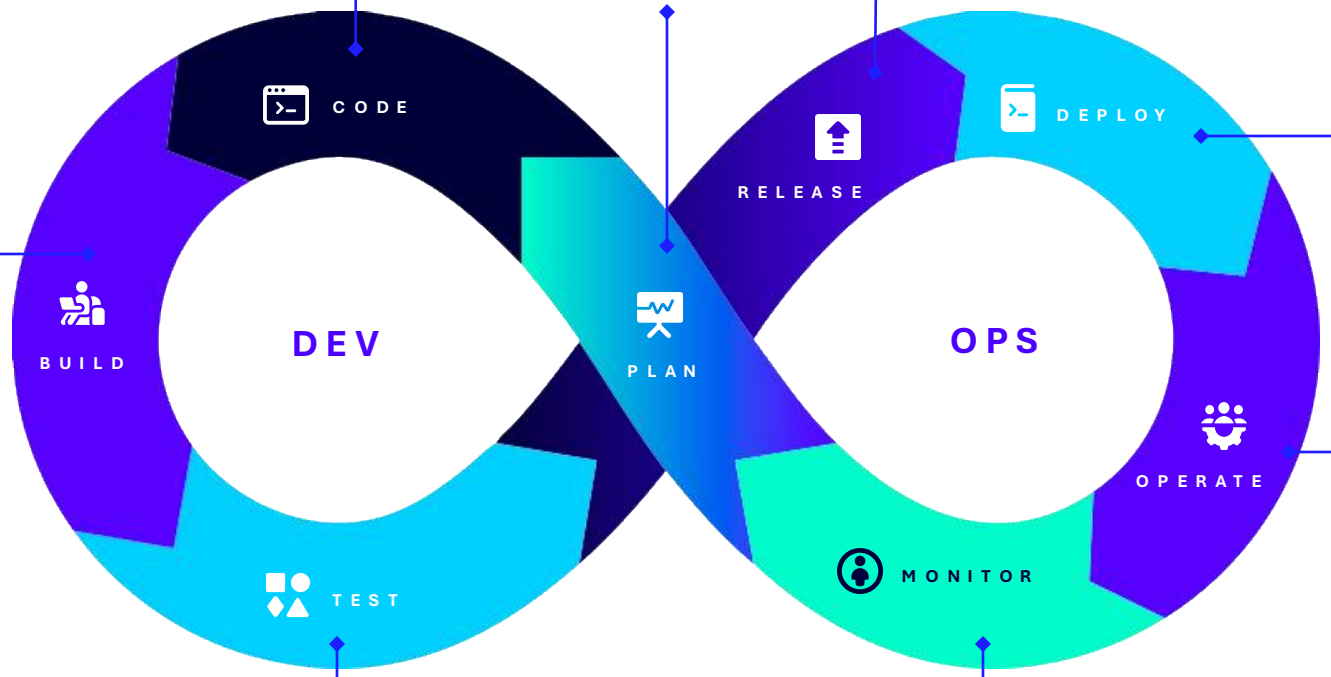
Large code and data repositories dictate the quality of AI Co-Pilots and Agents

Convergence of Software and Hardware Development Planning

Importance of scalable UX flows to review an increased speed of change with AI

Scale of long-lived and ephemeral environments goes beyond teams' ability to manage

Automation of concept to build for application development with AI (Vibe Coding)



Shift from task-based to policy-based operations to drive automation with AI

Advances in semantically aware AI breaks the boundaries of previous testing methodologies

Connected application, infrastructure, and security telemetry to drive proactive, AI-based action

perforce

Why Does Test Automation Need to Evolve?

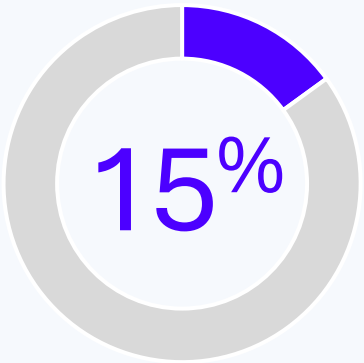
© Perforce Software, Inc. All rights reserved.

perforce

Legacy Testing Wastes Time

TEST CREATION

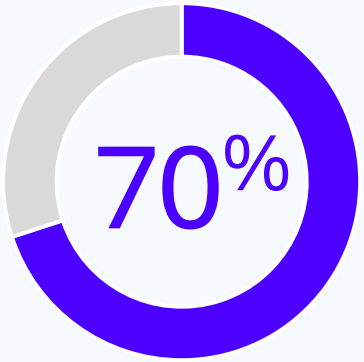
15% of effort is wasted writing scripts – across fragmented frameworks.



AI Copilots focus here

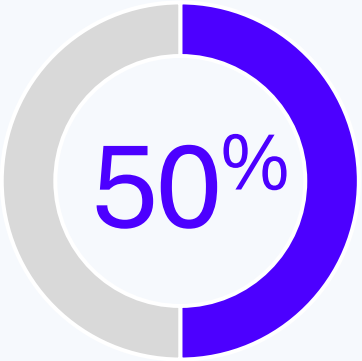
TEST MAINTENANCE

70% of automation effort is wasted fixing broken scripts.



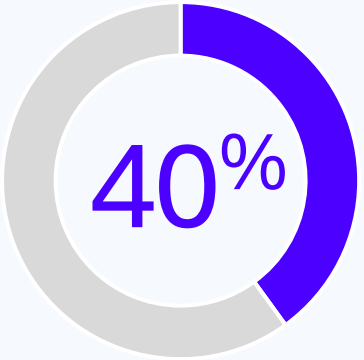
TEST EXECUTION

50% of test failures are caused by brittle scripts & UI changes.



TEST ANALYSIS

40% of time is lost Reviewing & triaging tests failures.



© Perforce Software, Inc. All rights reserved.

perforce

The False Copilot Fix – AI That Creates More Work

TEST CREATION

Fragile UI Logic

Still tied to fragile scripts – copilots don't eliminate the test creation.

TEST MAINTENANCE

Downstream Burden

Copilots generate more to maintain – more scripts, more upkeep, same burden.

TEST EXECUTION

Lacks Adaptability

Fails on real-world conditions – creates risk, not reliability.

TEST ANALYSIS

Manual Analysis

Teams still triage failures manually.

Copilots fix the easy part – and leave you with the hard stuff.

perforce

YOU DON'T NEED TO START OVER – JUST MOVE FORWARD

AI in Testing: Where Are You on the Journey?

⚠ Most people we talk to are stuck here

LEVEL 1 MANUAL TESTING	LEVEL 2 SCRIPT-BASED TESTING	LEVEL 3 SCRIPTLESS AUTOMATION	LEVEL 4 AI-ASSISTED TESTING	LEVEL 5 AI-AUGMENTED TESTING	LEVEL 6 FULL AI-DRIVEN TESTING
No automation.	Coded scripts. (ie – Selenium)	Low code test creation.	Copilot test creation.	No scripts. No frameworks. No maintenance.	AI runs everything – end to end.

We'll help you adopt AI incrementally, when you're ready.

perforce

Perforce's Unique Advantage

No Scripts. No Frameworks. No Maintenance.

CREATE

TEST THE UNTESTABLE.

Expose gaps across rich UIs, dynamic data and evolving experiences.

MAINTAIN

ZERO UPKEEP.

AI adapts to changes – no manual updates, no manual effort.

EXECUTE

ONE TEST. ANY PLATFORM.

Run the same test across Web, Native Mobile, and (soon) Performance.

ANALYZE

CATCH FAILURES FAST.

Isolate risks without digging through false alarms.

ACHIEVE 50%+ EFFICIENCY GAINS WITH PERFORCE

How Do Testers Need to Evolve?

© Perforce Software, Inc. All rights reserved.

perforce

From Executors to Enablers: The New Era of Testing in the Age of AI

As Agentic AI takes over repetitive execution, testers evolve from writing scripts to shaping the systems that define quality and trust.

- **Testers become enablers of value, shaping how AI delivers outcomes that matters.**
- **Testers need to understand business processes and their intent and be able to articulate that intent**
- **Natural fit for new AI roles:**
  - Model Validator – ensure reliability and guardrails
  - AI Ethicist – question bias, fairness, and impact
  - Prompt Engineer – shape interaction with genAI
  - Risk & Governance Specialist – embed compliance and oversight
  - Data & Analytics Translator – connect technical outcomes to business goals

perforce

Back to the Roots: Testing as Exploration and Inquiry

If AI can execute the tests, our human superpower becomes asking the right questions — the ones automation can't see.

- **Testing = exploration, discovery, and questioning**, not just validation.
- **Guiding questions for *modern* testers:**
  - What risks are we *not* seeing?
  - How do we validate *trust*, *fairness*, and *accessibility*?
  - Are we testing what truly matters for users and the business?
- **Human + AI partnership:** AI scales coverage, humans drive depth, empathy and meaning

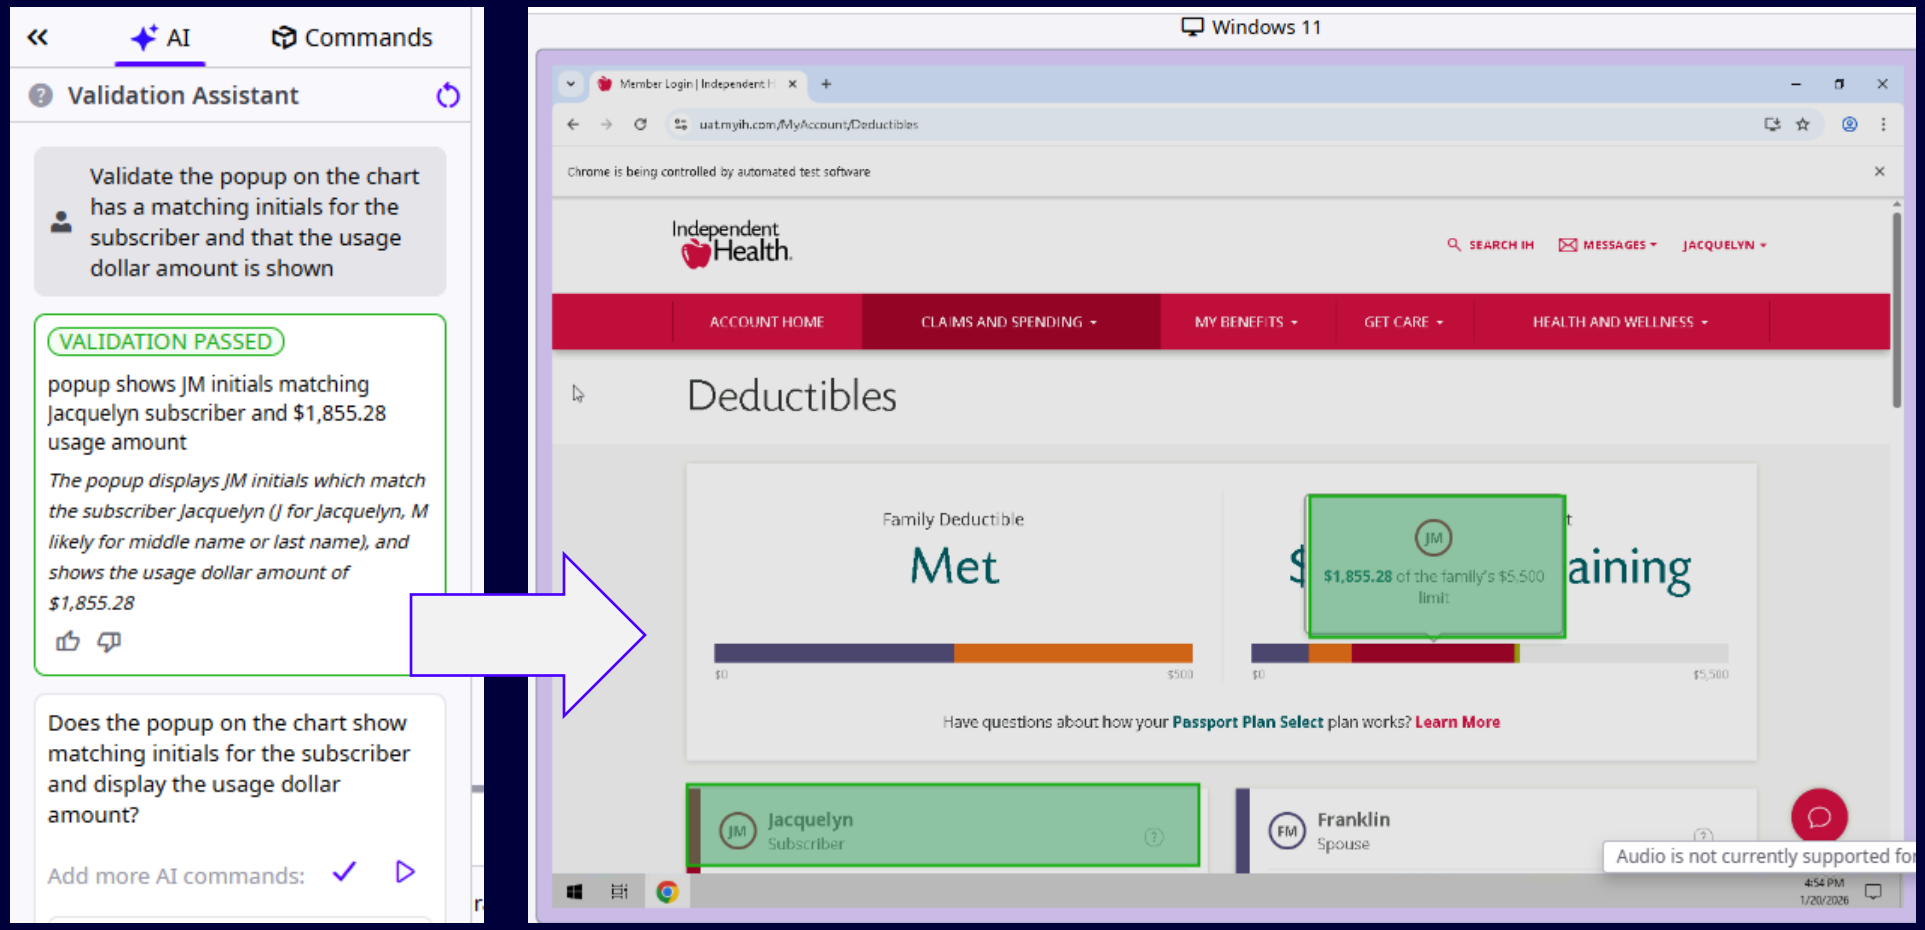
Testing the Untestable



© Perforce Software, Inc. All rights reserved.

perforce

The Untestable

- Validate that the family deductible is met with a full tracker graph
- Validate that the out of pocket has the remaining amount shown and has a chart with color coded allocations from each family member
- Using the color coded to the subscriber, hover over that color in the tracker chart under Family out of Pocket
- Validate the pop-up on the chart has a matching initials for the subscriber and that the usage dollar amount is shown

perforce

The Perforce Intelligence Advantage in Testing

CUT MAINTENANCE, NOT MOMENTUM

Cut scripts and upkeep – lower risk, accelerate delivery.

FUEL DEVELOPER VELOCITY

AI-driven coverage and triage keeps teams moving fast.

EXPOSE APP FAILURES – NOT TEST SCRIPT FLAWS

Spot what's wrong in your product, not in your automation.

GO BEYOND COPILOTS

Test the untestable. Execute, analyze and adapt – copilots stop at scripts.

AI ON YOUR TERMS

Adopt AI your way – across functional, mobile and enterprise.

NO SCRIPTS. NO FRAMEWORKS. NO MAINTENANCE.
